(540) 454-1170
Rocky Mount, VA (open to relocation – Charlotte, NC)
Remote-ready
Portfolio: colinshanahan.dev – live Azure infrastructure demo with CI/CD-powered status page and architecture docs

Summary

DevOps engineer and cloud architect with 10+ years across infrastructure, systems, and cloud automation. Sole owner of the full Azure estate at RDGFilings – CI/CD architecture, IaC (Terraform-first, with Bicep experience), security posture, and cost governance – serving as the bridge between application teams and infrastructure. Certified in Azure administration and DevOps (AZ-104, AZ-400) with deep experience migrating legacy toolchains (Octopus Deploy, Jenkins) to modern, credential-free pipelines.

Work Experience

RDGFilings

DevOps Engineer / Cloud Architect (sole DevOps owner)

Oct. 2022 – Present – Remote / Onsite

- Architected Azure DevOps CI/CD pipelines end-to-end, migrating legacy workflows from Octopus Deploy and Jenkins to Azure DevOps, reducing release cycles by 40% and improving deployment reliability.
- Authored Terraform (and Bicep) IaC to automate provisioning of Container Apps, Function Apps, VMs, Key Vault, and networking, replacing GCP-based systems with consistent, repeatable Azure deployments.
- Implemented OIDC / workload identity federation for all pipeline authentication, eliminating stored credentials and long-lived secrets from CI/CD and improving audit posture.
- Modernized a legacy Duende IdentityServer: programmatic Key Vault secret loading and a shared data protection key ring in Blob Storage encrypted with a Key Vault master key, enabling first-ever horizontal scaling – all traffic over private endpoints with zero public data-plane exposure.
- Served as liaison between application architects, developers, and infrastructure, translating operational requirements into DevOps processes in an Agile environment; mentored junior engineers on Azure DevOps best practices.
- Conducted a subscription-wide Azure security and cost audit via Resource Graph/KQL, including Reserved VM Instance retirement exposure analysis, driving remediation and cost-optimization decisions.
- Contributed to HIPAA compliance initiatives for a subsidiary, implementing secure configurations and documenting processes to meet regulatory standards.

American Electric Power (AEP)

Infrastructure Engineer

Jun. 2019 – Oct. 2022 – Roanoke, VA

- Led the onsite team managing critical restoration-focused infrastructure, including Oracle databases and Windows servers, sustaining 99.9% uptime.

- Designed and implemented failover systems using Azure DevOps, enabling rapid recovery and minimizing downtime; documented configurations and collaborated cross-functionally on complex issues.

1901 Group

Systems Administrator / Help Desk Lead

May 2015 – Jun. 2019 – Blacksburg, VA / Washington, DC

- Deployed Microsoft Intune for endpoint management, streamlining device configuration and security compliance.
- Performed networking (firewalls, DNS, switching) and served as mid-level escalation point for complex server and system issues, mentoring junior team members.

Selected Projects

- colinshanahan.dev – production portfolio on Azure Static Web Apps: GitHub Actions with OIDC (zero stored credentials), Terraform IaC, and a live status page driven by an Azure Function querying Application Insights (KQL, managed identity).

Education

Ferrum College

B.S. Computer Science

May 2015 – Ferrum, VA

Certifications & Skills

Certifications

- Microsoft Azure Administrator (AZ-104, 2026)
- Microsoft DevOps Engineer Expert (AZ-400, 2026)
- AWS Solutions Architect – Associate (2022)
- AWS Certified Developer – Associate (2023)
- CompTIA Security+ (2019)
- ITIL Foundation
- Microsoft Agentic DevOps Engineer Expert (AZ-401, in progress)

Cloud & IaC

- Azure (Container Apps, Function Apps, Key Vault, Static Web Apps, App Insights/KQL), AWS, GCP
- Terraform
- Bicep
- CloudFormation

CI/CD & Tooling

- Azure DevOps, GitHub Actions, Octopus Deploy, Jenkins
- OIDC/WIF
- Docker
- Git, Bitbucket
- PowerShell
- build-once/deploy-many
